TARIFF FORMAT

- A. Page Numbering - Page numbers appear in the upper right corner of the pages. Pages are numbered sequentially; however, new pages are occasionally added to the tariff. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between pages 14 and 15 would be 14.1.
- B. Page Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th Revised Page 14 cancels the 3rd Revised Page 14. Because of various suspension periods, deferrals, etc. the Commission follows in its tariff approval process, the most current page number on file with the Commission is not always the page in effect. Consult the Check Sheet for the page currently in effect.
- C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to the next higher level:
- 2.
 - 2.1
 - 2.1.1
 - 2.1.1.A.
 - 2.1.1.A.1.
 - 2.1.1.A.1.(a)
- D. Check Sheets - When a tariff filing is made with the Commission, an updated Check Sheet accompanies the tariff filing. The Check Sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new pages are added, the Check Sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc., remains the same, just revised revision levels on some pages). The tariff user should refer to the latest Check Sheet to find out if a particular sheet is the most current on file with the Commission.

SECTION 3 – APPLICATION OF RATES**3.1 Introduction**

The regulations set forth in this section govern the application of rates for services contained in other sections of this tariff.

3.2 Charges Based on Duration of Use

3.2.1 Where charges for a service are specified based on the duration of use, such as the duration of a telephone call, the following rules apply.

- A. Calls are measured in durational increments identified for each service. All calls that are fractions of a measurement increment are rounded-up to the next whole unit.
- B. Timing on completed calls begins when the call is answered by the called party. Answering is determined by hardware answer supervision in all cases where this signaling is provided by the terminating local carrier and any intermediate carrier(s). Timing for operator service person-to-person calls start with completion of the connection to the person called or an acceptable substitute, or to the PBX station called.
- C. Timing terminates on all calls when the calling party hangs up or the Company's network receives an off-hook signal from the terminating carrier.
- D. Calls originating in one time period and terminating in another will be billed in proportion to the rates in effect during different segments of the call.
- E. All times refer to local time.

 LOCAL EXCHANGE SERVICES

SECTION 3 – APPLICATION OF RATES, (CONT'D.)

3.3 Calculation of Distance

Where charges for a service are specified based upon distance, the following rules apply:

- 3.3.1 Usage charges for all mileage sensitive services are based on the airline distance between the rate center locations associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the applicable rate centers as defined by Telcordia (formerly Bellcore) and on file with the FCC in the following manner:

- 3.3.2 The airline distance between any two rate centers is determined as follows:

- Step 1: Obtain the "V" and "H" coordinates for the serving wire center of the Customer's switch and the destination point.
- Step 2: Obtain the difference between the "V" coordinates of each of the Rate Centers. Obtain the Difference between the "H" coordinates.
- Step 3: Square the differences obtained in Step 2.
- Step 4: Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5: Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6: Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers of the call.

Formula:
$$\sqrt{\frac{|V_1 - V_2|^2 + |H_1 - H_2|^2}{10}}$$

Call Forwarding Don't Answer – Allows incoming calls to be automatically routed to a preselected station line or attendant in the same system or outside the system, when the called station is not answered after a preset number of rings. Intercom calls can be arranged to be forwarded to a number different from DID calls.

SECTION 8 – MISCELLANEOUS SERVICES, (CONT'D.)**8.6 Optional Line and Trunk Features, (Cont'd.)****8.6.1 Description, (Cont'd.)****A. Business Line and Trunk Features, (Cont'd.)**

Call Forwarding Variable - When this feature is activated by a station line user or the attendant, incoming calls to the activated station line or attendant position will be automatically routed to any other selected station line, within the same Centrex system, or to the attendant position. The attendant may also activate this feature for a station line user.

Call Return - Allows a Customer to dial a code that will cause the feature to automatically redial the number of the last incoming call to that line, whether the call was answered or not. The Customer does not have to know the number of the calling party. If the called number is busy, the feature will redial the called number for a limited period of time. A tone alerts the Customer when the called line is available. This service is available on a usage or subscription basis.

Call Tracing - Allows a called party to initiate an automatic trace of the last call received. Call Trace is available on a usage basis only. After receiving the call which is to be traced, the Customer dials a code and the traced telephone number is automatically sent to the Company for further action. The Customer originating the trace will not receive the traced telephone number. The results of a trace will be furnished only to legally constituted law enforcement agencies or authorities upon proper request by them. The company is not liable for damages if, for any reason, the Call Trace attempt is not successful.

SECTION 8 – MISCELLANEOUS SERVICES, (CONT'D.)**8.6 Optional Line and Trunk Features, (Cont'd.)****8.6.1 Description, (Cont'd.)****A. Business Line and Trunk Features, (Cont'd.)**

Call Waiting - Provides a tone/signal to a Customer that has a call in progress, that another call has been placed to that Customer's telephone number. The Customer may elect to hold the first call, by use of the switchhook, and answer the second call; as well as alternate between calls by pressing the switchhook. The Customer may elect not to respond to the signal, and continue the original call. Call Waiting may be deactivated prior to making an outgoing call, (or during a call if the Customer has Three-Way Calling).

Caller ID - Name and Number Allows for the automatic delivery of a calling party's name and telephone number (including nonpublished and nonlisted telephone numbers) to the called Customer, which gives the called Customer an opportunity to decide whether to answer the call immediately or not. The name and number are displayed on Customer provided equipment.

Remote Access - Forwarding Allows all incoming calls to be forwarded to another telephone number. It allows the Customer to remotely change the termination of their incoming calls. From any tone signaling telephone, the Customer can activate, deactivate, or change the destination number.

Repeat Dialing - Allows a Customer to dial a code that will cause the feature to automatically redial the last number the Customer dialed. If the called number is busy, the feature will redial the called number for a limited period of time. A tone alerts the Customer when the called number becomes available. This service is available on a usage or subscription basis.

Speed Calling - Permits a station line user to dial selected numbers by using fewer digits than normally required. This is accomplished through the assignment of abbreviated codes to frequently called numbers. The speed calling list is Customer-changeable.

Three-Way Calling - Offers the capability to add a third party to an existing call, by depressing the switchhook. This service is available on a usage or subscription basis.
